ADDITION OF ZINC/NICKEL ALLOY PLATING

Wisconsin Plating Works of Racine, Inc. is pleased to announce they have added ZINC/NICKEL ALLOY PLATING to their list of specialty finishing capabilities. This finish offers substantially better corrosion resistance than that of electroplated zinc and zinc/cobalt alloy, and is chromatable to clear, yellow and black colors.

As a frequently specified finish in the automotive industry, zinc/nickel plated components are used in fuel delivery, power steering, air conditioning and hydraulics systems, and offers over 1000 hours of salt spray protection.

Send a RFQ and print to the attention of Robert Toeppe for prompt response. In addition, samples may be processed at no cost or obligation for comparative analysis.
